What is a Astro Photographer? A person who takes pictures of the space, especially using astrophotography. For which kind of pictures can you use APT? For photography, for astronomical observatories (telescopes) or celestial bodies. If you are interested in observing, or want to improve your photography skills, APT is a right choice for you. What is the difference between a good camera and a good software? This question is often asked by many amateurs who are starting to practice astro photography. We do not want to give a wrong answer to it. In a way, we are talking about two different things, and we would like to explain the difference. The first is the camera, which we mentioned above. In a general way, it is a photographic equipment, which consists of a lens, a sensor, a computer and a battery. Everything is what makes a photograph possible. This equipment is already a good one, but it does not make a photograph. And not having a software is not something to be proud of. With APT, you will be able to take better pictures. And the second thing, which we want to talk about, is the software. Which means all the functionalities, menus, steps, and so on. The software is what you can use to create images, preview them, take photos, compare them and manipulate them. Astro Photography Tool lets you take better pictures. And let's take a closer look at this topic. How to use Astro Photography Tool? Step by step guide to use Astro Photography Tool software. So, now you are quite aware of the basic functions of the software. We still can not say that you are a master with this software, or a professional. You can use APT without taking photos. And as you keep on practising, you will be able to build your skills and use APT to take the best pictures. It is up to you. Features of Astro Photography Tool software.
