Adobe's *Photoshop* recently got a major overhaul in its latest version, Photoshop 44. The release of the update is inspired by graphic and editorial designers looking for a new and more intuitive way to edit images. To provide a detailed comparison, let's take a look at some of the other long-standing competitors including Photoshop and GIMP. Adobe's own imaging software package, Adobe Lightroom 5 is the successor to the popular Adobe Lightroom 4. Lightroom aims to be the place where photos are viewed, sorted, and organized, ready to promote on Social Media platforms like Facebook and Twitter, and be ready to download and print when it's time to retire the memory card. There is much to like about Lightroom as a package, but there is a uniformity to the user interface that is a bit off-putting at times, and also a price. If you are willing to pony up the money, you can get quite a few features that start to sink the cost. Lightroom is, simply put, a great tool, but whether or not it is right for you isn't all that clear. It is much more advanced in many areas than it was four years ago, and that is both good and bad. Lightroom is especially complete on the still and video fronts. Among the many reasons why it's the tool of choice for many photographers, Lightroom also does a great job of capturing and processing image-based data automatically, in a non-destructive workflow. As such, it becomes safer to use. Lightroom is also a platform that makes the best use of the import and export plugins that are available. That said, I think it's apparent that Photoshop is only gaining strength, and Lightroom is likely to remain a niche tool for photographers over the long haul.
