The gradient tool can be found on the fill tool and it can be used to create a gradient. The gradient can be set to linear or radial. The linear type will create a straight horizontal or vertical line whereas the radial gradient will produce a shape. The gradient tool can also create a beveled edge if you click on the edge of the gradient. A beveled edge exists when the gradient on the top of a path is darker than the gradient on the bottom of it but the gradient on the edges are the same. This technique can create a soft appearance. You could use this technique to create a blurred edge to a picture. 933d7f57e6
