Windows Azure SDK for.NET is a free set of tools and libraries designed to quickly build, deploy, and manage applications on the Windows Azure platform. Windows Azure SDK for.NET comes with the Windows Azure Emulator, C# language and framework, Visual Studio integration, a set of sample applications, and a command-line interface. For an introduction to the Windows Azure platform, including Windows Azure SDK for.NET, see the Windows Azure home page at Windows Azure Emulator: Windows Azure SDK for.NET comes with the Windows Azure Emulator. The Windows Azure Emulator is a full-featured implementation of the Windows Azure platform that you can use to develop, test, and debug applications running in Windows Azure. You can use the Windows Azure Emulator to create a cloud service, cloud table, cloud queue, or cloud blob. Develop Windows Azure applications with C# You can develop Windows Azure applications in C#, the language and development framework used to create Windows and.NET applications. Windows Azure SDK for.NET includes a sample C# application named AppSample.exe that shows you how to create a Windows Azure application and host it in the Windows Azure Emulator. Windows Azure platform services Windows Azure SDK for.NET includes a set of platform services that you can use to develop applications that interact with Windows Azure-managed storage and compute resources. Windows Azure SDK for.NET includes the following platform services: Windows Azure Service Bus Service - Service Bus is an extremely flexible cloud-based messaging system that enables you to easily distribute messages in Windows Azure, scale your service, and manage security. Windows Azure Blob Service Service - The Windows Azure Blob Service is a durable, flexible, fully managed storage service that enables you to store binary data in Windows Azure. Windows Azure Table Service - The Windows Azure Table Service is a highly-scalable cloud-based table storage service for building applications with durable, flexible data access. Windows Azure Worker Role Service - Windows Azure Worker Role is a Windows Azure service that executes long running or CPU-intensive jobs, such as data processing or number crunching. You can use this service to build scalable applications that can execute and run on-premises and in the cloud. Windows Azure Site Recovery Service - The Windows Azure Site Recovery Service provides highly-available disaster recovery in Windows Azure. The service provides you with a highly-scalable, off-premises, geographically dispersed, web-based recovery
